

Aimo Park | Scandic Fornebu car park

Our payment options

We offer several different payment options - find the one that suits you best. Your parking can either be paid **automatically** as a registered customer and app user, or **manually** to a payment machine, online within 48 hours or pay with full flexibility with the Product FLEX. Read more about the options below.

Automatic charge

As a registered customer at the Aimo Park app or EasyPark app you will be charged for each parking when you drive in and out several times during the day. You will anyway never pay more than the daily price per 24-hour period, calculated from the first time you drive in.

[Klick here for more information about Automatic charge.](#)

Manually payment to the payment machine

Pay manually at the payment machine at the car park before departure. The payment machines are located on each parking floor and you can use payment cards or coins. If you drive in and out several times during the day, you must pay for each parking period before departure, otherwise you will automatically assign the product FLEX. You will still not pay more than the daily price per 24-hour period, calculated from the first drive-in.

Manually payment online within 48 hours

You can also pay for your parking online after you have driven out of the parking facility. Your entry and exit from the parking facility is read and recorded by the camera - the Aimo Park Easy system calculates your parking time.

NOTE: You must pay within 48 hours after departure at the car park to avoid using **FLEX**.

FLEX-product

By choosing this product, you don't need to do anything, drive into the car park, park and drive out again. The license plate on your vehicle will be automatically registered by cameras when entering and exiting, and you will receive an invoice per parking afterwards where the product has a fixed price + ordinary rate. The invoice fee is charged when invoicing. In addition you will get a payment deferral.
